Title: Mixed-Integer Programming Models for Simultaneous Batching and Scheduling in Multipurpose Batch Plants

Author: Hojae Lee Christos T. Maravelias

PII: S0098-1354(17)30288-0

DOI: <http://dx.doi.org/doi:10.1016/j.compchemeng.2017.07.007>

Reference: CACE 5863

To appear in: *Computers and Chemical Engineering*

Received date: 10-3-2017

Revised date: 29-6-2017

Accepted date: 22-7-2017

Please cite this article as: Hojae Lee, Christos T. Maravelias, Mixed-Integer Programming Models for Simultaneous Batching and Scheduling in Multipurpose Batch Plants, *Computers and Chemical Engineering* (2017), <http://dx.doi.org/10.1016/j.compchemeng.2017.07.007>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Novel MIP models are developed for scheduling/batching in multipurpose facilities.
- Models account for various objective functions and storage constraints.
- Models account for time-varying resource constraints and costs.
- We show how instance characteristics can be used to select most effective model.
