This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We test the impact of prior impulse control and glucose on monetary discounting.
- Prior impulse control increases patience, in contrast with the resource model.
- A placebo is just as effective as glucose in increasing patience.
- The interventions operate by reducing utility curvature and present bias.
- We suggest a two-systems mechanism to explain our results.
