This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Title: Structural networks involved in attention and executive functions in multiple sclerosis

Authors: Sara Llufrui^{1*}¶, Eloy Martinez-Heras^{1¶}, Elisabeth Solana¹, Nuria Sola-Valls¹, Maria Sepulveda¹, Yolanda Blanco¹, Elena H. Martinez-Lapiscina¹, Magi Andorra¹, Pablo Villoslada¹, Alberto Prats-Galino², Albert Saiz¹.

¶These authors contributed equally to this work (co-first authors).

Keywords: MRI, connectivity, tractography, graph analysis, multiple sclerosis, cognition.

Number of tables: 2.

Number of figures: 4.

Supplementary material: Figures S1, S2, S3, S4 and S5.

Number of words: 3976.

Highlights

1. High order tractography and anatomical exclusion criteria improves connectivity analyses.
2. Structural connectivity is less efficient in multiple sclerosis.
3. Attentional and executive functions relates to integrity of strategic networks.
4. Increased connectivity suggests structural reorganization mechanisms.
