This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Running head: SPS AND ENVIRONMENT

Modified single prolonged stress reduces cocaine self-administration during acquisition
regardless of rearing environment

Rebecca S. Hofford^{1*}, Mark A. Prendergast¹, Michael T. Bardo¹

Kentucky, Lexington KY, 40536, rebecca.hofford@uky.edu

Highlights

- *Enriched, standard, and isolated rats underwent modified single prolonged stress
- *Exposure to modSPS attenuated cocaine self-administration early in training
- *Corticosterone increased after modSPS but was not moderated by environment
- *modSPS did not alter glucocorticoid receptor expression in hypo, mPFC, amyg, or NAc
