This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We propose a mesh-based modeling system to generate Chinese calligraphy relief.
- The relief is constructed by combining a homogeneous height field and an inhomogeneous height field together via nonlinear compression function.
- We provide several intuitive control parameters for the users to interactively adjust the appearance of the relief.
