Improved data visualisation through nonlinear dissimilarity modelling

Iain Rice

PII: S0031-3203(17)30289-3
DOI: [10.1016/j.patcog.2017.07.016](https://doi.org/10.1016/j.patcog.2017.07.016)
Reference: PR 6219

To appear in: *Pattern Recognition*

Received date: 17 March 2017
Revised date: 29 May 2017
Accepted date: 17 July 2017

Please cite this article as: Iain Rice, Improved data visualisation through nonlinear dissimilarity modelling, *Pattern Recognition* (2017), doi: [10.1016/j.patcog.2017.07.016](https://doi.org/10.1016/j.patcog.2017.07.016)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Elastic MDS is extended to learn observation dissimilarities from a dictionary
- The dictionary of dissimilarities is nonlinearly combined with an RBF network
- Four standard datasets show the improvement over standard Elastic MDS
