This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Towards Reporting Standards for Neuropsychological Study Results: A Proposal to Minimize Communication Errors with Standardized Qualitative Descriptors for Normalized Test Scores

Running Head: Reducing Errors in Communicating Neuropsychological Results

Mike R. Schoenberg, PhD

Professor

Department of Neurosurgery and Brain Repair

University of South Florida Morsani College of Medicine

Search Terms:

1. Neuropsychological Assessment
2. Professional Issues
3. Qualitative descriptors
4. Interpretation
5. Reporting Standards

Highlights:

- Qualitative descriptors for neuropsychology scores vary substantially.
- Variable terms can impede communication of neuropsychological test results.
- A simplified test score qualitative reporting system (Q-Simple) is proposed.
- Q-Simple integrates Bayesian measurement with historical psychometrics.
- Standardized terms can improve communication of neuropsychological results.
