This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The nonlinear behaviors of a beam under a sinusoidal fluid flow with a nonlinear absorber are studied.
- The NES is located at various positions on the pipe conveying fluid.
- Numerical and analytical approaches are adopted to analyze the system.
- Middle of the beam is the best position for connecting the NES to the beam.
- Approaching the NES to the beam supports lowers the occurrence probability of the SMR, DRC and WMR.
