This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A super-parallel DG solver for the second-order constitutive models of rarefied and microscale gases is developed.
- Parallel implementation of a mixed DG method is achieved for triangular meshes.
- Computational cost of the serial and parallel solvers is investigated for various rarefied and microscale conditions.
- Super-parallel performance of the second-order algebraic NCCR model is reported for the first time.
