This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

***Highlights (for review)**

Highlights

1. General systems of frequency distributions are presented.
2. Most frequency distributions used in environmental and water engineering can be derived from these distribution systems.
3. A new system of frequency distributions is proposed.
4. The proposed system is based on hypotheses derived from empirical data.
5. Any frequency distribution whose cumulative distribution is given in explicit form can be derived from the proposed system.
