This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- . The detection rate of *Salmonella* in Shanghai was 24.1% in this study.
- . There were no positive samples found in egg and raw milk samples.
- . *S. Enteritidis*, *S. Typhimurium* and *S. Derby* were the predominant serovars.
- . MLST and PFGE can provide a strong power of molecular typing.
- . *Salmonella* isolates from supermarket, farmers' market and slaughterhouse had great connection.
