This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Cost efficiency studies for the U.S. banking industry do not account for market power.
- Modelling market power at the geographic level and cost efficiency at the firm level is challenging.
- I address this issue by using moment inequalities alongside a demand model for banking.
- Estimated parameters suggest that cost efficiencies are either weak or absent.
- Merger simulations show the relative importance of market power and efficiencies.
