This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- We propose a computational model to study cooperation and evacuation efficiency.
- In this model, we quantify the connection between the amount of cooperation and evacuation efficiency.
- We observe the highest evacuation efficiency for intermediate levels of cooperation.
- The model can provide a decision-making basis for emergency response involving large-scale crowd evacuation.
