Title: Construction of Intelligent Traffic Information Recommendation System Based on Long Short-Term Memory

Author: Fanhui Kong Jian Li Zhihan Lv

PII: S1877-7503(17)31408-4
DOI: <https://doi.org/doi:10.1016/j.jocs.2018.03.010>
Reference: JOCS 848

To appear in:

Received date: 18-12-2017
Revised date: 6-3-2018
Accepted date: 21-3-2018

Please cite this article as: Fanhui Kong, Jian Li, Zhihan Lv, Construction of Intelligent Traffic Information Recommendation System Based on Long Short-Term Memory, *Journal of Computational Science* (2018), <https://doi.org/10.1016/j.jocs.2018.03.010>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- 1) To the best of our knowledge, it is the first time that the recommendation system is designed for use in intelligent transportation system.
- 2) The framework can gain access to traffic congestion information at specific time intervals, through the data obtained by automatic sensors.
- 3) We use the LSTM model to improve the robustness and coupling of recommendation system.
