This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We develop and apply a novel method for eliciting laboratory subjects' preference
- The method incentivizes providing a quick, intuitive response *and* a more thought-out response
- We apply the method to the Charness & Rabin's choices measuring social preference
- We find that disadvantageous inequity-aversion ("envy") is stronger under time pressure
