This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The slack time is collected by a periodic virtual task.

Processor utilization is used to further balance the execution frequency of related tasks.

The preemption during the task execution is analyzed and the number of preemption times is reduced.

Several energy-efficient scheduling algorithms with reliability guarantee are designed.
