This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

We price real estate index options under stochastic interest rates based on a partial differential equation.

The non-tradable and the mean-reverting characteristics of the real estate index are considered.

We propose a modified finite difference method that adopts the non-uniform grids.

The effects of stochastic interest rates on real estate index options depend on whether the term structure of interest rates is rising or falling.
