Title: Bit-Wise Pseudo-Bayes Genetic Algorithms to Model Data Distributions

Author: Anton Aguilar-Rivera

PII: S1568-4946(17)30759-7

DOI: <https://doi.org/doi:10.1016/j.asoc.2017.12.034>

Reference: ASOC 4631

To appear in: *Applied Soft Computing*

Received date: 25-1-2017

Revised date: 6-11-2017

Accepted date: 18-12-2017

Please cite this article as: Anton Aguilar-Rivera, Bit-Wise Pseudo-Bayes Genetic Algorithms to Model Data Distributions, *Applied Soft Computing Journal* (2017), <https://doi.org/10.1016/j.asoc.2017.12.034>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The work proposed a bit-wise approach to define the partition of Bayesian networks.
- An approach for the construction of Bayesian networks is proposed.
- The construction approach is based on genetic algorithms, random keys and chain structures.
- The proposed method models the probability distribution of data through sampling.
- The method is suitable for robust optimization, risk estimation, and stochastic optimization.
