This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- We present a test-chamber study of the nano-sized emission from paints.
- The results show differences in emissions between solvent-borne and water-borne paints.
- No emission of Carbon Black nanoparticles from indoor paints was found.
- Due to a short emission period, low exposure to nano-sized emission was found.
