This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Risk-averse centralized and decentralized decision-making models are studied.
- Pricing, sales volume, and production decision under demand disruption are calculated.
- Results show that change in decision making is a linear function of demand disruption.
- Change in decision making is also independent from the risk-averse coefficient.
- Stability of sales volume is related to market share and demand disruption.
