Vanja Piljak would like to thank the Foundation for Economic Education and Evald and Hilda Nissi Foundation for financial support. Laurens Swinkels would like to disclose that he is also affiliated with Norges Bank.

Abstract

We investigate correlation dynamics and diversification properties of US dollar-denominated debt issued by governments of frontier markets. Our analysis is on the aggregate, regional, and country level, with a sample covering 29 countries over the period 2001–2013. We show that the correlation between the returns of frontier government bond markets and US government bonds is time-varying, but on average close to zero. Correlations with US investment grade corporate bonds, US corporate high yield bonds, and US dollar-denominated debt issued by governments of emerging markets are substantially higher, which limits diversification benefits for investors who already own these asset classes.
