Please cite this article as: Y. Liu, C. Huang, Q. Dai, Preferential selection based on strategy persistence and memory promotes cooperation in evolutionary prisoner's dilemma games, *Physica A* (2018), <https://doi.org/10.1016/j.physa.2018.02.027>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

- Preferential selection based on strategy persistence and memory in prisoner's dilemma games is investigated.
- Individuals inclined to select their neighbors with relatively higher persistence levels could enhance cooperation.
- The memory length plays a critical role in the cooperation promotion by the preferential selection.
